

NEW PRODUCT RELEASE

24 Volt Universal Direct Spark Ignition Control Module

BASO has designed-in features to retrofit other universal Direct Spark Ignition controls with spark ignition and flame rectification such as: Johnson Controls, Honeywell, White Rodgers, Fenwal, and Robertshaw.

We have different configurations to match your specific application. Retry and recycle delays, purge time, and trial times all factory programmed. Designed in 100 percent pilot shutoff/lockout with a 5 minute continuous retry.

BASO series BG Direct Spark Ignition Controls are microprocessor based controls suited for replacement and new applications. Applications for Direct Spark Ignition include space heaters, furnaces, residential /commercial boilers, and a variety of other commercial cooking equipment.

Our Direct Spark Ignition Controls are designed to safely deliver and control Natural Gas, LP Gas, and Manufactured Gas.

Certified to CSA requirements to control main gas valves, the ignition control safely ignites the spark electrode for Natural and LP gas fired applications while continuously and precisely monitoring the sensor for flame.

Mounting of the Ignition Module is done with 2 - (#6-32) screws for secure mounting vertical or horizontal surface mount.
